

ENVIRONMENTAL POLICY STATEMENT

Avondale is committed to the protection and enhancement of the environment and the development of sustainable products and design solutions.

We aim to:

- constantly strive to assess the environment impact of site operations on the local area, the neighbouring offices and general public and adopt appropriate measures and standards to prevent, or where this is not possible, minimise the impact of pollutants such as dust, noise, vibration and odours
- select construction methods that minimise the use of natural resources associated with the use of energy and materials and encourage clients, designers, suppliers and sub-contractors to adopt acceptable environmental standards in their products and operations. We investigate and where appropriate, promote the use of by-products, recyclable and sustainable materials
- seek to minimise waste production and avoid contamination by any waste produced by ensuring that disposal is safely handled by licenced operators
- ensure our sub-contractors and suppliers handle their waste responsibly and as part of our management process only involve those contractors with whom we have taken steps to understand their environmental policies
- fully comply with all current and emerging legislation
- measure our impact on the environment and set targets for ongoing improvements
- ensure that the operational directors review this policy at least annually or as necessary
